

Chemical toilet disposal point

A hygienic device for emptying the chemical toilet in the caravan or motor home cannot be missed from any camping facility.

Leisure Technics offers an efficient solution for both by way of drain plate for a caravan and a filling pit for the motor home. Both are manufactured from 316 stainless steel plate and therefore guaranteed for years of problem free use.

To empty the caravans cassette toilet we recommend our stainless steel drain plate, which is available separately or pre-fabricated by us mounted on an impact resistant trespa housing .

The standard size is 900x600mm and has a 110cm drain making connection to the main drain simple.

We provide you with the connection set with the odourless systems and the necessary pipes.

It is possible for an additional charge to order the plate shorter or wider to ensure a perfect fit for easy cleaning and maintenance.

The standard colour is cream but can be ordered in any RAL colour for an additional charge.

Leisure Technics has a stainless steel bulk tank for the emptying of the waste water. This has a stainless steel lid which is placed on concrete well and can be connected to the main drain.

The lid and the well are suitable for a motor home to drive over. The lid can be easily opened and closed by using your foot.

To keep the area neat and tidy, we recommend that you place a tap next to the site with clear instructions for use.
