

## Field units

Our field units are characterized by the use of solid materials such as impact-resistant polyester, coated galvanized steel, anodized aluminium or stainless steel 304 or 316.

These units are made by well known European manufactures and are made to our own design and specifications.

The units are available for electricity, drinking water natural-/propane gas, cal, but also in a combinations of these such as electricity / gas and cal integrated in one unit.

This allows a comprehensive range of standard cabinets , but also provides customer specific requirements and high corrosion resistance, impact stability, burglar proofing and colour combinations.

It is also possible to leave some additional mounting space in the cabinet for any future changes or adjustments. This will keep your cabinet always looking neat and sleek.
