

Retractable Multi-Bollards

Leisure Technics retractable Multi-Bollards can be used by shops, offices, warehouses, parking areas and driveways. There are Multi-Bollards available in many different types and sizes with the C700 being the most widely used model. This type is not only extremely strong but also unique by its telescopic operation. During the day the Multi-Bollard is retracted into the ground which means that it's not visible and does not cause an obstruction. The bollard can be raised in the evening and secured by a safety lock providing a strong and reliable obstacle.
