

Multi-bollard type C 700

Our retractable multi-bollard offers a good solution to controlling the access of vehicles. As in most cases there is little or no supervision in these areas, Leisure Technics will be able to advise you on all matters using their expert knowledge and practical experience. Leisure Technics is also takes care of the complete installation and maintenance of this system.

- The dynamic multi-bollard C700 is a solid construction and is completely manufactured out of stainless steel 316. The bollard has a wall thickness of 4mm.
- Operation can be either pneumatic or hydraulic offering a high level of operational security.
- The multi-bollard can be operated by a simple switchbox. The choice of control system depends largely on the situation in which the product is used.
- The dynamic Multi-bollard is suitable for all possible situations whereby traffic has to be regulated, such as:
 - car parks
 - bus lanes
 - market squares
 - public highways
 - City centres where traffic is discouraged
 - Pedestrianised areas
